ABSTRACT:

PROBLEM TO BE SOLVED: To enhance moldability and mountability of a color ink cartridge.

SOLUTION: The interval of ink supply ports 10a-e projecting from the bottom face of ink containing chambers 2a-e is equalized regardless of the width thereof in order to facilitate the arrangement of ink supply needles and the mounting of an ink cartridge. Furthermore, a seal rubber to be fitted in the ink supply port is made to flex easily so that the ink supply port is communicated surely with the ink supply needle regardless of positional shift of some degree.
